Remarks to Cited References

37 CFR 1.111(c) requires an Applicant to clearly point out the patentable novelty which Applicant thinks the newly added claims present in view of the state of the art disclosed by the references cited. According to MPEP 714.02 and 714.04, Applicant is to clearly point out the patentable novelty of a newly added claim by specifically pointing out how the language of the claim patentably distinguishes the claim from the references cited, in order to provide a complete prosecution record as to why the claim should be allowed over the prior art of record. Applicant has presented such arguments below for the new independent claim 17.

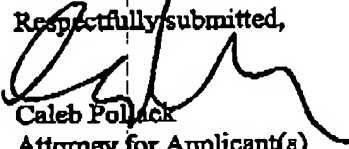

Townsend et al. discloses a mobile cellular telephone 100 comprising a GPS microcontroller 106 and a communications microcontroller 103. Townsend et al. does not teach or suggest a processor that performs both the function "to calculate the location of the mobile unit" from the GPS signals and the function "to process base station signals received by said communication transceiver from said base station and to provide said communication transceiver with signals to be transmitted to said base station", as recited by new claim 17.

Wallace et al. discloses antennas for mobile phones and Nakagawa et al. discloses a DSP. Neither reference teaches or suggests the above-quoted limitations of new claim 17.
